

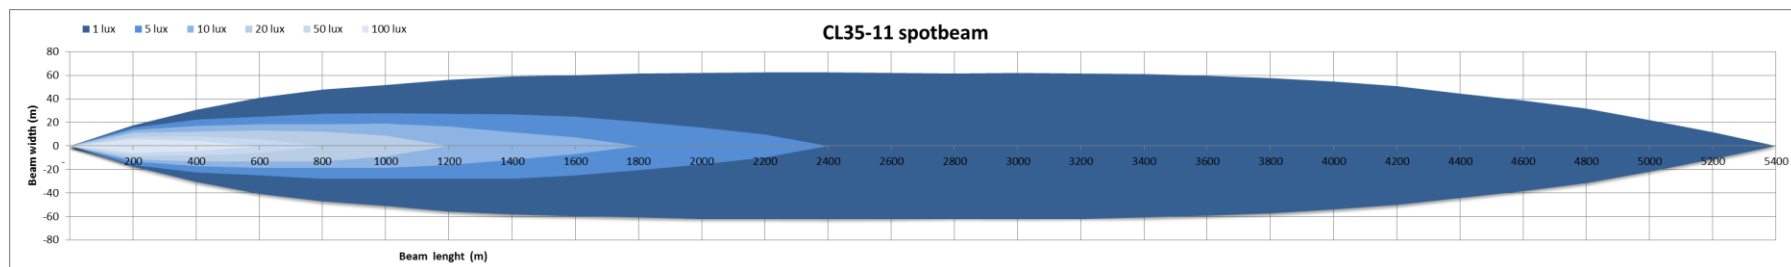

Graphical beam projection CL35-11

The beam projection presented in below graphical diagram shows the power of the multipurpose searchlights from ColorLight.

Some points to note:

- The scale on x and y axis is not in relation to each other. This is only to make it easier to read and understand the combination of the reach out in length and width. In reality the shape is much more spotlike.
- The maximum length is over 5300 m (1 lux)
- The beam is 120 m in width from 1000 m up to 4200 m with minimum 1 lux.

Graphical shape based on test report MTKPX24610 issued by SP
