

# Eikon, a sign of a new living.

## General features

### Soft-action movement for the buttons.

The transfer of movement from the button to the mechanism has been completely redesigned with a joint-pin system (1) protected by a worldwide patent. The standstill of the button has been cushioned with co-moulded rubber elements (2-3-4-5). The spring geometry of the moving contact of the mechanism performs a natural cushioning function, reducing its electrical recoils and wear, also thanks to a large increase in the quantity of silver of the contacts. This reconciles the safety of the electric switching with the smoothness of the operation. You can check the result yourselves: reduction in the movement of the button, less stand-out of the plate and a muffled sound. In short: state-of-the-art for control devices.

### Cover plates.

106 colours and a wide range of combinations in five premium materials:

**Metal:** Bright and Galvanic

**Wood:** solid natural wood

**Stone:** natural stone

**Glass:** crystal

**Inox:** stainless steel, brushed,

brushed anthracite and cotton

**Reflex:** technopolymer.

### Laser engravings.

At the back by each terminal to describe its function, on one side with commercial data and on the opposite side with technical data.

### Interchangeable buttons.

1-, 2- and 3-module, with backlighting symbols and customizables

### Lowered frame.

The semi-transparency helps with device installation and wiring. The honeycomb structure makes it sturdy. The reduction of the volume of the light fixture to a minimum.

### The frame.

In 3 colours: grey anthracite, white and Next.

### Night&day symbols.

Supplied as standard or on request, even in minimum quantities. The latter are laser cut in the specific backlit area of the button. Perfectly visible by day, at night thanks to the signalling on the back, they are coloured with a warm amber light, restful and matching the displays of the electronic devices.

### Plack-clack system.

Hooking of the components of the light fixture, patented by Vimar. Greater structural strength, extraordinary rigidity, easily connecting and disconnecting devices at the front.

The spring geometry of the moving contact of the mechanism performs a natural cushioning function, reducing its electrical recoils and wear, also thanks to a large increase in the quantity of silver of the contacts.

### Single packing in box with barcode

The appliance is protected against knocks, dropping and dust and is well identified. In all cases where the methods of installation are not obvious, the appliances are equipped with an instruction sheet. The EAN 13 barcode, used by over 100 countries, is printed on every level packing and permits automatic inventory management with optical readers and computer systems connected to them.

## General features

Eikon offers a complete system of solutions. A residential series with a rigorous, refined design, capable of harmoniously blending into different living styles. A wide range of cover plates, from the refined rigour of the **Classic**, to the smooth shapes of **Round**; 106 stylistic choices that permit many combinations in six premium materials: Metal, Wood, Stone, Glass, Inox and Reflex. Three color versions for the switches: the timeless anthracite **grey**, the technological matt silver of **Next** and the newest **white** finish.

Methane gas detector

Dimmers

TORCIA, hand lamp

**Devices for Comfort:** thermostats with display for residential and services sectors; timer-thermostats with 2 and 3 modules, programmable timer-switches and alarm clocks. All with straightforward, user-friendly programming and amber backlighting display and buttons.

**Devices for Safety:** methane gas, LPG and carbon monoxide detectors, three safety concentrates with acoustic and optical warnings, and in addition, interlocked socket outlets, circuit breakers and SPD overvoltage suppressors.

Think of timer-thermostat with large display that is easy to read. Press lightly on the front. Take it out thanks to the push-push mechanism. And then take it with you to your armchair, to comfortably program the climate in your home with four buttons and the central cursor. Eikon is this too. A family of devices to manage the climate and automations. With straightforward, user-friendly programming and amber backlighting of the display and buttons.

Timer-thermostat

Just a few buttons and a display to program the actions and design the scenes. By-me integrates functions of home automation, video door entry, burglar alarm system, multi-zone climate management and remote control in a single system, devised entirely by Vimar but open to dialogue with Konnex networks.

Multi-zone control unit, Next.
